

## Securing peace of mind

Are you looking for a company that understands the risks associated with deploying a high security project?

With in-depth experience in a range of unique security environments, we know that making changes to an IT system can be a critical time.

As experts in the area, we develop bespoke security solutions for critical national infrastructure including:

- ✓ Transportation
- ✓ Utilities
- ✓ Health
- ✓ The Ministry of Justice.

Our unique offering covers proof of concept, design and deployment, with comprehensive testing to minimise your risk.

### You benefit from

- ✓ De-risking of high security projects
- ✓ Purpose built high security site
- ✓ Prince2 trained project managers
- ✓ Extensive experience & technical expertise

Call us today.

## Reducing your risk – The critical factors

Two elements can significantly reduce your risk when deploying high security system projects. We'll ensure your project goes to plan, helping you avoid any major financial or political consequences.

### Factory & site acceptance testing

Testing is critical in the development of any system, and particularly important for

integrated systems where unexpected issues may arise. Our testing covers all aspects of your system's functionality under all possible scenarios.

### Pre-deployment configuration

Reduce your risk further by building your system prior to installation. Our in-house engineers assemble and test

all equipment before deployment, ensuring that everything works perfectly. This means that your system can be installed and commissioned with minimal disruption to you and your site.

---

## Meet the experts

Our highly experienced team is second to none when it comes to systems design and delivery, and can develop and deploy the most sophisticated integrated systems.

All team members have the following qualifications: APMG, SMSTS, IOSH Health and safety qualified and fully conversant with CDM.

- ✓ Cisco certified
- ✓ Microsoft certified
- ✓ EC Council certified Ethical Hackers
- ✓ Application developers (cloud, hosted solutions, mobile, desktop)
- ✓ 3D / CAD graphics production

---

## State of the art facilities

Our custom built site is considered one of the best test facilities in the UK. Perfect for high security projects, it has been physically hardened to provide a secure environment for testing.

- ✓ Secure data centre incorporating Cisco and HP switches and network
- ✓ Control room and diagnostic centre
- ✓ Operator desk and other training facilities
- ✓ Secure workshop setup and test area
- ✓ Cat6 and fibre structured cabling environment
- ✓ Internal and external CCTV combined with an electronic access control system
- ✓ Easy access: in Newark, near Nottingham
